

NGUYEN LE TUAN

tuanlenguyen612@gmail.com | 0708 573 967 | Thu Duc, Ho Chi Minh City | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

Third-year Software Engineering student with hands-on experience building full-stack web applications and RESTful APIs. Strong foundation in clean architecture, OOP, and the Node.js/ReactJS/TypeScript stack. Experienced with CI/CD pipelines, Docker, and AI assistant tools. Eager to learn, self-driven, and comfortable picking up new technologies on the job.

Availability: Full-time internship — able to start immediately.

EDUCATION

Ho Chi Minh University of Transport

Sep 2023 – Sep 2027 (Expected)

B.Eng. Information Technology – Software Engineering

GPA: 3.2 / 4.0

CERTIFICATIONS & ACTIVITIES

- **English Proficiency:** Vietnamese (Native), English (Intermediate — technical reading and writing)
- **Interests:** Badminton (active player), Music

SKILLS

Language	JavaScript (ES6+)
Frontend	ReactJS, TypeScript, HTML5, CSS3, Vite
Backend	Node.js, Express.js
Database	MongoDB, MySQL, Mongoose
API & Auth	RESTful APIs, JWT Authentication, Swagger, Postman
DevOps & CI	Git, GitHub, GitHub Actions, Docker
AI Tools	GitHub Copilot, ChatGPT, Claude, Gemini

PROJECTS

Task Management Workspace

Feb 2026 – Apr 2026

<https://github.com/Ltuan126/Task-Management-API>

| *Node.js, Express.js, MongoDB, ReactJS, TypeScript, GitHub Actions*

- Structured the backend using a **5-layer architecture** (Route → Controller → Service → Repository → Model) with Express to separate business logic from database operations.
- Built **server-side pagination, full-text search, and multi-field sorting** utilizing robust Mongoose indexes to ensure efficient data querying and low response latency.
- Wrote **11 automated integration** tests using Supertest and Jest, achieving a solid **78.51% line coverage** across critical authentication paths and query edge cases.
- Configured a **CI/CD workflow via GitHub Actions** that spins up an isolated, **in-memory database** (mongodb-memory-server) to automatically run the full test suite on every push and pull request.
- Documented all RESTful endpoints with **Swagger UI** accessible at /api-docs to provide an interactive API reference, streamlining frontend-backend integration.
- Containerized the application with **Docker**, defining a **Dockerfile** to ensure a consistent, portable runtime environment across development and deployment stages.

Perfume Shop – E-Commerce Web Application

Jun 2025 – Present

<https://github.com/Ltuan126/Perfume>

| *Node.js, Express.js, MongoDB, ReactJS, Tailwind CSS*

- **Architected and designed 22 robust RESTful API** endpoints across 6 core modules (Product, Order, Auth, Payment, QA, and Review), implementing custom request-validation middleware to enforce strict API contracts.
- Engineered a secure authentication ecosystem featuring role-based access control (RBAC), utilizing short-lived **JWT access tokens** paired with **HttpOnly refresh cookies** and a token-versioning mechanism for instant session revocation.
- **Modeled resilient database schemas using Mongoose**, optimizing query performance via text and compound indexing for multi-criteria filtering, while enforcing data integrity through server-side business invariant calculations.
- **Developed automated database seeding scripts utilizing Upsert operations** to safely populate and synchronize production-ready datasets (including main and "Mini" product variations) without creating duplicate records.
- **Integrated third-party payment gateways (MoMo/VNPay)** along with Cash-on-Delivery (COD) flows, ensuring deterministic, atomic server-side order creation and a high-availability checkout experience.
- Leveraged **GitHub Copilot and ChatGPT** throughout development to accelerate boilerplate generation, debug complex logic, and draft technical documentation — improving overall development velocity.
